

Recombinant Rabbit Monoclonal Antibodies for CHIP Grade

Epigenetic mechanisms that help regulate gene activity do not change DNA sequence but affect the gene expression by either histone modifications, DNA methylations, or three-dimensional chromatin configuration. And it is not surprising that they play critical roles in disease prevention, diagnosis, and treatment. ABclonal provides innovative research tools such as high-quality monoclonal antibodies, assay kits, molecular enzymes, biochemical reagents, etc. Antibodies have undergone multiple strict in-house validations to ensure their application in CHIP, CHIP-seq, and CUT&Tag, which can provide you with complete and innovative solutions.
